真正的压力读数

Real pressure readings

大多数浓缩咖啡机会告诉您泵的压力，这是没有用的。咖啡粉饼的压力才是您需要知道的，我们是提供它的少数几台机器之一。这些信息对于培养您的咖啡粉饼的认识和准备至关重要。

Most espresso machines will tell you the pressure of the pump, which is useless. The pressure of the coffee bed is what you need to know, and we are one of the few machines that provide it. This information is crucial to developing your coffee bed awareness and preparation.

真正的萃取温度

Real extraction temperature

大多数浓缩咖啡机会告诉您锅炉的水温，这是没用的，接触咖啡粉饼的水温才是萃取温度，我们是实时展现并控制它的少数几台机器之一。水温是萃取品质最关键的因素之一。

水温误差值精确到0.1°C；而传统商用咖啡机水温误差值介乎3°C；家用咖啡机水温误差值通常在10°C内。高端咖啡机才能有如此精准的水温控制功能。

Most espresso machines will tell you the water temperature of the boiler, which is useless, the water temperature touching the coffee powder is the extraction temperature, and we are one of the few machines that can display and control it in real time. Water temperature is one of the most important factors of extraction quality.

The water temperature error value is accurate to 0.1 °C; The traditional commercial coffee machine water temperature error value is within 3 °C; Home coffee machine water temperature error value is usually within 10 °C. Only high-end coffee machines have such precise water temperature control.

数字化预浸泡系统

Digital pre-soaking system

专家们认为萃取轻度烘焙的咖啡豆最佳方法是在低压情况下，以60秒非常缓慢地完成咖啡粉预浸泡。

Experts believe that the best way to extract lightly roasted coffee beans is to complete a very slow pre-soak of ground coffee in 60 seconds at low pressure.

渐进式萃取

Progressive extraction

在咖啡萃取过程中，由外而渐进式萃取，水量精准控制，流速更均匀，吸水量更足，萃取均衡，更充分。

In the coffee extraction process, from the outside and progressive extraction, precise water volume control, more uniform flow velocity, more water absorption, balanced extraction, more adequate.
